

# Function Examples

Last updated 5/15/24

These slides provide a couple of C function examples

# Functions Examples

- Single File Program Structure

Includes

Function Declarations

```
void main(void){  
    ...  
    foo = fun1(a, b);  
    fun2(2, c);  
    if(fun1(c, d)) {  
        ...  
    }  
}
```

Function 1 Definition

Function 2 Definition

# Functions Examples

- User Defined Functions – example 1

*declaration*

```
float vol(float length, float width, float height);
```

```
int main(void){  
    float volume;  
    float W;  
    float L;  
    float H;  
    // enter W, L, H  
    ...  
    volume = vol(L, W, H);  
    ...  
    return 0;  
}// end main
```

Actual  
Parameters

Formal  
Parameters

*call*

values passed -  
not the variables

W=5  
L=3  
H=2

volume = vol(3,5,2);  
volume = 30

*definition*

```
// proper description – see following slides  
float vol(float length, float width, float height){  
    float tmp_val;  
    tmp_val = length * width * height;  
    return tmp_val;  
}// end vol
```

length = 3  
width = 5  
height = 2  
return 30

# Functions Examples

- Example
  - inputs and return value

```
/*
 * functions_examples.c
 *
 * Created on: Dec 4, 2019
 * Author: johnsontimoj
 */
///////////
// Example functions for class notes
//
// inputs: function dependent
// outputs: function dependent
//
///////////
#include <stdio.h>

// function declarations
int bigger(int val1, int val2);

int main(void){
    setbuf(stdout, NULL); // disable buffering

    // Local variables
    int x;
    int y;
    int z;

    while(1){
        // Get inputs
        printf("Please enter a values for x and y: ");
        scanf("%i %i", &x, &y);

        // determine bigger value
        z = bigger(x, y);

        // print the value
        printf("The bigger value is: %i\n\n", z);
   }// end while

    return 0;
} // end main
```

```
/////////////
// bigger()
//
// function to return the larger of two integers
// result is available for further processing
//
// inputs: 2 ints
// output: larger int
/////////////
int bigger(int val1, int val2){
    int big_val;
    if(val1 > val2)
        big_val = val1;
    else
        big_val = val2;

    return big_val;
}// end bigger()
```

# Functions Examples

- Example
  - no inputs and no return value

```
/*
 * functions_examples.c
 *
 * Created on: Dec 4, 2019
 * Author: johnsontimoj
 */
// Example functions for class notes
//
// inputs: function dependent
// outputs: function dependent
//
#include <stdio.h>

// function declarations
void smaller(void);

int main(void){
    setbuf(stdout, NULL); // disable buffering

    // Local variables

    while(1){

        smaller();

    } // end while

    return 0;
} // end main
```

```
///////////////////////
// smaller()
//
// function to return the smaller of two integers
// result is not available after the print
//
// inputs: 2 ints
// output: smaller int
///////////////////////
void smaller(void){
    int x;
    int y;
    int z;

    // Get inputs
    printf("Please enter a values for x and y: ");
    scanf("%i %i", &x, &y);

    if(x < y)
        z = x;
    else
        z = y;

    // print the value
    printf("The smaller value is: %i\n\n", z);

    return;
} // end smaller()
```

# Functions Examples

- Example
  - no inputs and return value

```
/*
