

# Rough Outcomes List

---

Dr. Yoder
<p>Lecture 1-2</p> <ul style="list-style-type: none"><li>• Define soft, firm, hard real-time systems</li><li>• Define real-time system</li><li>• Define embedded system</li><li>• Define event, synchronous, asynchronous, aperiodic, sporadic, punctual, deterministic, stochastic</li><li>• Don't exhibit the 5 misconceptions commonly made about real-time systems</li></ul> <p>Not covered:</p> <ul style="list-style-type: none"><li>• Explain why deterministic algorithms may be superior for real-time systems</li></ul> <p>Lecture 1-3:</p> <ul style="list-style-type: none"><li>• Compute the theoretical response-time of a person grabbing a stick</li><li>• Measure above experimentally</li><li>• etc.</li></ul>
<p>Lecture 2-1:</p> <ul style="list-style-type: none"><li>• Read distances in time and voltage on an oscilloscope</li><li>• etc.</li></ul> <p>Lecture 2-2:</p> <ul style="list-style-type: none"><li>• Describe distances on a waveform</li><li>• Compute period from frequency, and vice-versa</li><li>• etc.</li></ul> <p>Lecture 2-3:</p> <ul style="list-style-type: none"><li>• Analyze simple circuits involving resistors and switches in series</li><li>• (optional) Describe how different signals sound.</li><li>• (introduced later) Given information about standard encodings, describe maximum frequency that can be heard.</li></ul>
<p>Lecture 3-1:</p> <ul style="list-style-type: none"><li>• Describe how to not burn up your beaglebone</li><li>• etc.</li></ul> <p>Lecture 3-2, 3-3</p> <ul style="list-style-type: none"><li>• Do simple programming exercises in C</li><li>• (optional) compute the power of a signal</li><li>• etc.</li></ul>
<p>Lecture 4-1:</p> <ul style="list-style-type: none"><li>• Resistor color codes</li><li>• pthreads (see also: qt threads)</li><li>• POSIX sockets (see also: qt sockets)</li></ul> <p>TODO: when? Covered (Lecture 4-3?)</p> <ul style="list-style-type: none"><li>• Explain the concept of a Beaglebone cape</li><li>• Understand how to read a basic schematic<ul style="list-style-type: none"><li>○ Explain the concept of a pull up and a pull-down resistor</li></ul></li><li>• Explain the difference between polling and interrupts</li><li>• Explain how an interrupt service routine is handled</li></ul>

- JLDDefinitions, Flowchart, Timing diagram
- Cartoons
- Detailed steps

- Explain the purpose for a watchdog timer

Not yet covered:

- Explain the concept of a system on a chip
- Explain the concept of a dropping resistor
- Limiting current through an LED
- Explain the process of **setting the time out** on the Watchdog Timer

TODO: When? Covered.

- Watchdog Timer (wrap-up)
  - “Video” of rotating timer
- Conditional compilation
  - **Code demo**

Covered in lab only:

- multithreading
  - **Code demo**

Lecture 4-2

- Quiz: Define real-time and embedded systems
  - Slides have notes for discussions
- CPU Utilization
  - **In-class exercise**
- Interrupts

TODO: When? Covered earlier

- Operating System Roles
  - Essential (Scheduling, Dispatch, Intertask comm and sync)
  - Important (Privatized memory, I/O services, “Supporting features”)
  - Handy (UI, Security, File management)

TODO: when? Covered by Schilling

- Resistor Color Codes

TODO: When? Covered earlier

- Sockets on an embedded platform

Not yet covered:

- TODO: **demo**

Lecture 5-3

- RTOS Scheduling
  - Task State Diagram
  - Pre-runtime vs runtime scheduling
  - Round Robin Scheduling
    - Impact on latency
  - Cyclic Code Scheduling
  - Rate-Monatomic Scheduling
    - **In-class Exercise**

Lecture 6-1

- **Review only**

Lecture 6-2

- **Exam**

<p>Lecture 6-3</p> <ul style="list-style-type: none"> <li>• <b>Good Friday</b></li> </ul> <p>Not covered</p> <ul style="list-style-type: none"> <li>• Selecting frame size in cyclic code scheduling</li> </ul>
<p>Lecture 7-1</p> <ul style="list-style-type: none"> <li>• Gstreamer application</li> </ul>
<p>Lecture 7-2</p> <ul style="list-style-type: none"> <li>• QT Application</li> </ul>
<p>N/A</p>
<p>Not covered</p>
<p>Lecture 7-3</p> <ul style="list-style-type: none"> <li>• Data-rate <ul style="list-style-type: none"> <li>○ Explain the relationship between bandwidth and image quality for a video stream.</li> <li>○ Calculate the bandwidth needed to deliver a given quality video</li> <li>○ Calculate bandwidth required to achieve a particular compression ratio, etc.</li> <li>○ Explain the differences between MB, Mb, MiB, and Mib, and similarly for KB, GB, TB.</li> <li>○ Write out MB, etc. in full form (e.g. Mebibits for Mib).</li> <li>○ Convert between orders of magnitude using MiB and MB, etc.</li> <li>○ Explain the advantage of MiB over the modern MB.</li> <li>○ Explain actions you should take if you see a unit like MB in documentation. Explain why you should take action.</li> <li>○ Give two reasons why a higher frame-rate might be good</li> <li>○ Explain the stroboscopic effect</li> <li>○ Describe two approaches to correct the stroboscopic effect</li> <li>○ Calculate the maximum data rate of a channel under noisy signal conditions</li> <li>○ Explain the Nyquist sampling theorem</li> </ul> </li> </ul> <p>In Lecture 8-1 slides, covered 8-2:</p> <ul style="list-style-type: none"> <li>• Rate Calculation <ul style="list-style-type: none"> <li>○ Explain the Nyquist sampling theorem (cont.)</li> <li>○ Calculate the minimum sampling rate necessary to transmit a signal using the Nyquist Theorem</li> <li>○ Explain the relationship between the number of bits and quality when quantizing a signal</li> </ul> </li> </ul> <p>Not covered:</p> <ul style="list-style-type: none"> <li>• Rate Calculation <ul style="list-style-type: none"> <li>○ Calculate the maximum data rate of a channel under noiseless signal conditions</li> </ul> </li> <li>• Critique the Java language for usage in Real Time Systems <ul style="list-style-type: none"> <li>○</li> </ul> </li> </ul>
<p>Not covered</p> <ul style="list-style-type: none"> <li>• Optimize source code using well known optimization techniques, such as <ul style="list-style-type: none"> <li>○ Repeated calculations</li> <li>○ Constant folding</li> <li>○ Loop invariance removal</li> <li>○ Induction variance</li> <li>○ Loop unrolling</li> <li>○ Loop jamming</li> </ul> </li> </ul>
<p>Lecture 8-3</p> <p><i>This lecture may need to be greatly reduced next time around to avoid redundancy with previous classes.</i></p>

*Needs to focus on how this impacts real-time systems.*

- Static Analysis
  - Understand the difference between static analysis and testing
  - Define the halting problem
  - Explain the difference between a false positive and a false negative
  - Construct a primitive static analysis tool using grep
  - Describe the impact of using static analysis tools over time
  - Compare and contrast style guides and programming standards
  - Explain the steps necessary to integrate static analysis into a development process
  - Explain the steps necessary for new code
  - Explain the steps necessary for legacy code

Lecture 9-1

- (optional) Derive the statistics necessary to determine if two processes have the same mean

Lecture 9-2

- Determine p-value for the difference of two means when the std. is known
- Determine p-value for the difference of two means when the std. is unknown
- Determine confidence intervals for two processes having the same mean
- Determine whether two processes have a significantly different means
- Describe how “significant” can be quantified
- Determine the probability of success if failure during each hour is independent
- Determine the probability of success if prob. of failure is linearly increasing per hour
- List the three or four key steps you would use to quantify whether a failure rate similar to  $10^{-10}$ /hr is a reasonable failure rate for a given software system

Lecture 9-3

- Describe the advantages and disadvantages of Structured Analysis and Design (SA/SD) compared to Object-Oriented Analysis and Design (OOAD)
- Give an example of a hierarchical SD.
- Explain the importance of data dictionaries to any kind of design (e.g. both SD and OOD)
- Explain how SD & data dictionaries can aid in discovering incompatible data representations

Covered previously, optional for this class

- Explain the difference between internal and external qualities of software
- List the 8 qualities of real-time software
- Explain how one might assess the qualities of real time software
- Explain the concept of software reliability
- Explain the exponential model of software reliability
- Explain the reliability curves typically exhibited by software
- Calculate the reliability of a software system at a given time
- Explain how one might measure the 8 qualities of real time software
